

SITE & AREA ANALYSIS REPORT

Drawn area of interest

Saburtalo, Tbilisi

AREA

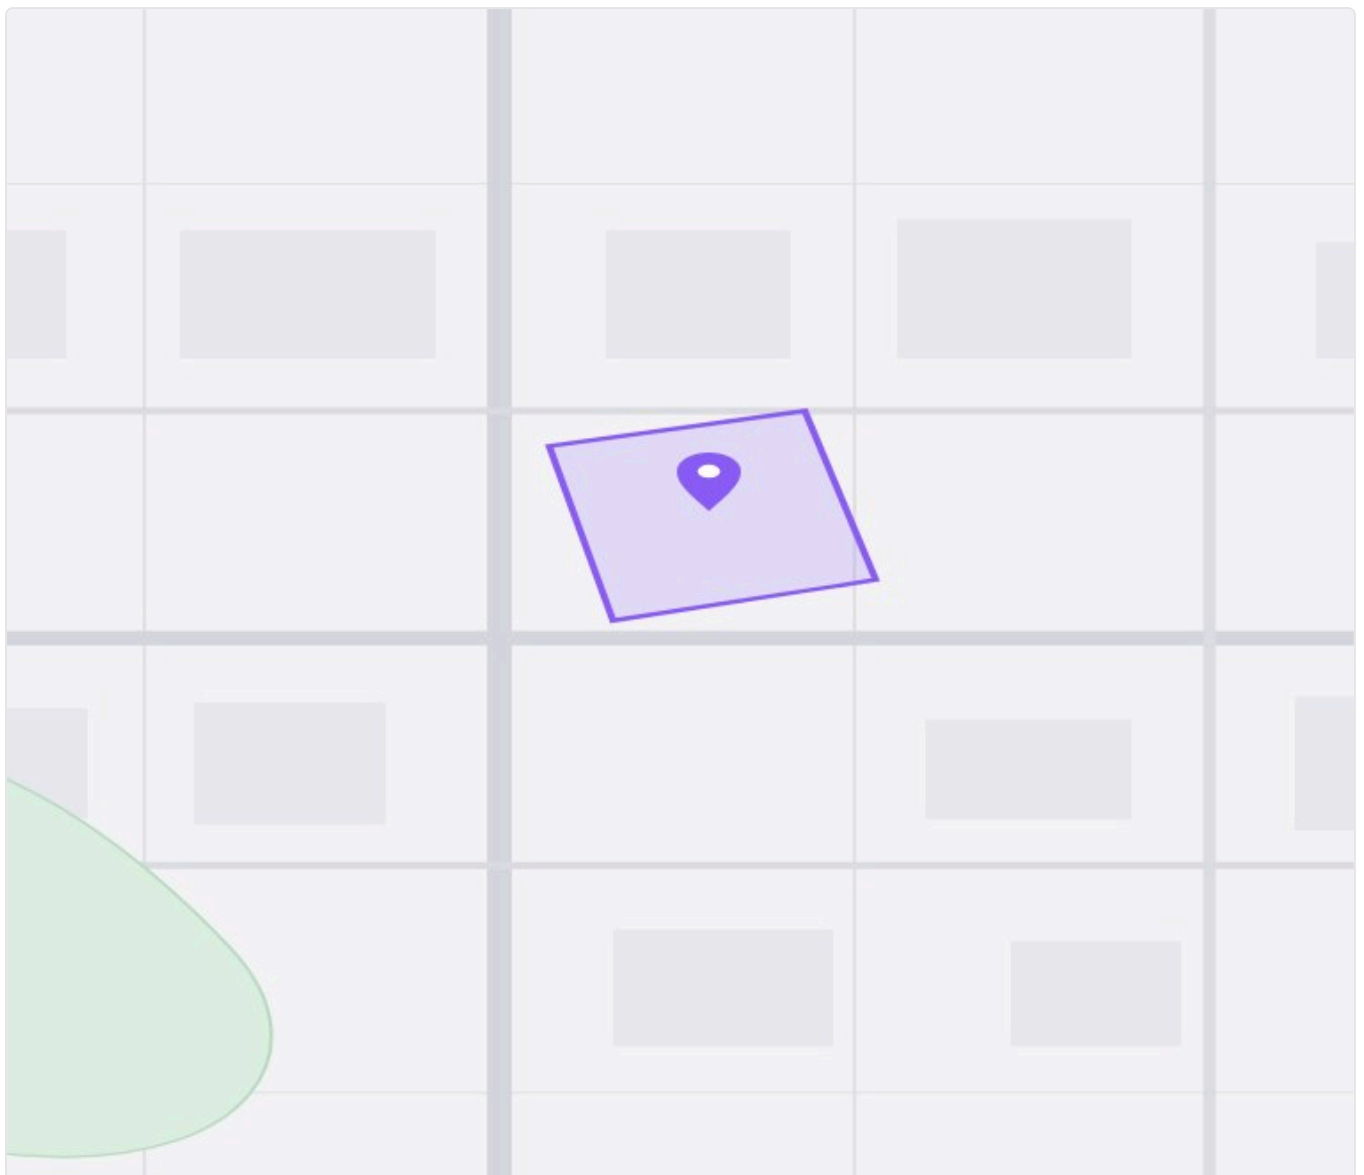

18.4 ha

ANALYSES

Relief · Solar

ISSUED

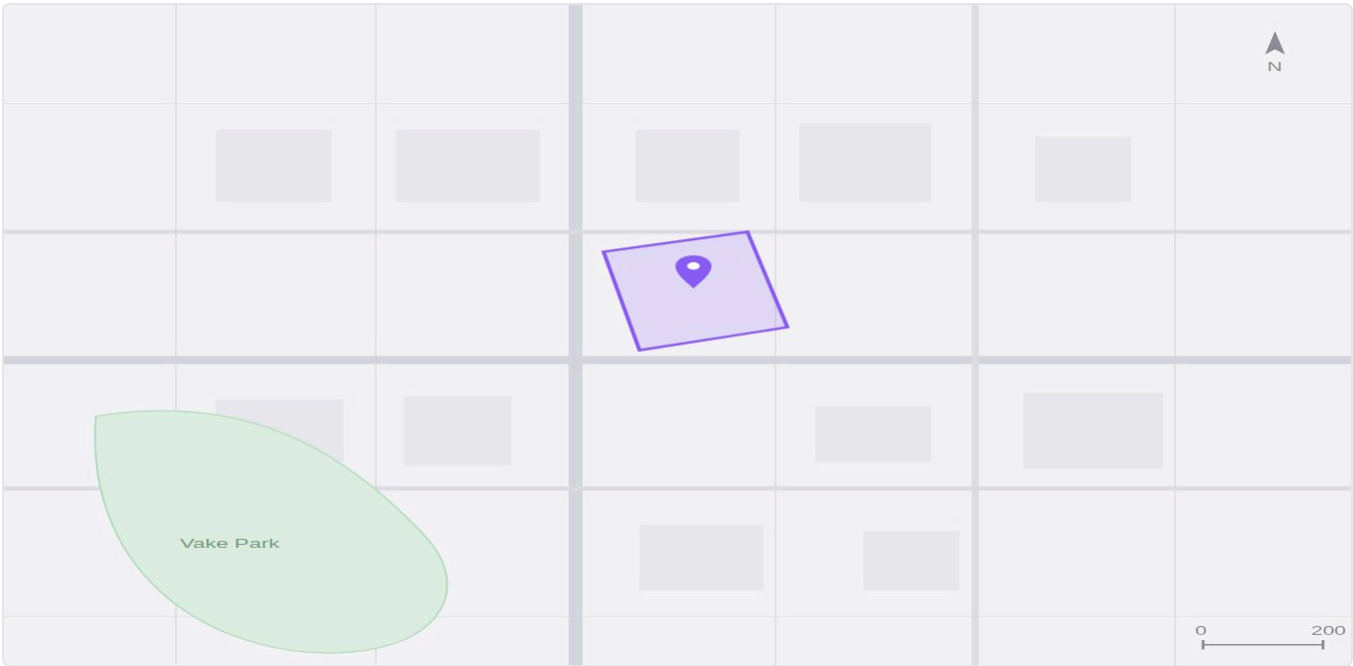

6 September 2026

Study area. Basemap © Mapbox, © OpenStreetMap contributors.

Map

All active analysis layers on one capture, with a combined legend.

Basemap © Mapbox, © OpenStreetMap contributors.

RELIEF · SLOPE

- 0–5°
- 5–12°
- 12–20°
- 20–30°
- 30°+

SOLAR ZONE

- High irradiation
- Low irradiation

Findings

Only the analyses active in this export are reported.

• Relief · slope · aspect

Active layer	Slope
Distribution	0–5° 31% · 5–12° 38% · 12–20° 21% · 20–30° 8% · 30°+ 2%
Mean · max	9.4° · 34.1°

• Energy potential

Solar	41% of the area above 4 kWh/m ² /day · south and south-west aspects dominant
-------	---

| Sources

Collected in order of appearance; only sources actually used are listed.

Elevation	Digital terrain model; slope and aspect derived on the fly
Solar	Slope/aspect irradiation model on the DTM
